(<https://www.youtube.com/channel/UCqOG4zIDmbIUk12Fzwg5tLA>) on Thu Jul 13 2017.

The Future of Freedom Foundation is pleased to announce one of the most fascinating, important, and relevant conferences in our 27-year history.

Entitled “The National Security State and JFK,” the conference was held on Saturday, June 3, 2017, at the Dulles Airport Marriott in Northern Virginia.

Ron Paul was a Republican presidential candidate in 2008 and 2012 and the Libertarian Party presidential candidate in 1988. He served in the U.S. House of Representatives from 1976-1977, from 1979-1985, and from 1997-2013. One of the country’s most ardent defenders of freedom, peace, free markets, and sound money, Paul has long been a fierce critic of the Federal Reserve System, the IRS, the war on drugs, socialism, empire, interventionism, and the national-security establishment. He has also been an ardent defender of civil liberties and a vocal critic of the USA PATRIOT Act, torture, indefinite detention, and NSA surveillance programs. A graduate of Gettysburg College and Duke University School of Medicine, Paul was a practicing obstetrician-gynecologist from the 1960s-1980s. The Founder of the Ron Paul Institute, Paul is the author of several books on Austrian economics and classical liberalism, among which are *The Case for Gold*, *A Foreign Policy of Freedom*, *End the Fed*, *Pillars of Prosperity*, *The Revolution: A Manifesto*, *Swords into Plowshares*, and *Liberty Defined*.

[Music] Ron Paul was a Republican presidential candidate in 2008 and 2012 and the Libertarian Party presidential candidate in 1988 he served in the US House of Representatives from 1976 to 1977 from 79 to 85 and from 97 to 2013 one of the country's most ardent defenders of freedom peace free markets and sound money Paul has long been a fierce critic of the Federal Reserve System the IRS the were on drugs the war on drugs socialism empire intervention ISM and the national security establishment he has also been an ardent defender of civil liberties and a vocal critic of the USA PATRIOT Act torture indefinite detention and NSA surveillance programs a graduate of gigs burg college in Duke University School of Medicine Paul was a practicing obstetrician-gynecologist from the 60s through the 80s the founder of the Ron Paul Institute Paul is the author of several books and Austrian economics and classical liberalism among which are the case for gold a foreign policy of freedom in the Fed pillars of prosperity the revolution a manifesto swords into plowshares and defined liberty and a my dad he is an absolute personal hero of I think every libertarian in the libertarian movement especially me [Applause] the title of Ryan's talk is enemies foreign and domestic please welcome Ron Paul thank you very

00:02:05 (<https://www.youtube.com/watch?v=pKjT9JizVgM&t=125s>)

please welcome Ron Paul thank you very much thank you bumper and thank you for inviting me you know when I was back in Washington I would give occasional speeches I'd take time at a special order you could get time five minutes sometimes even up to an hour and one thing that happened with those speeches I did my very best but I never had any applause so so I'm glad to come here you little pause once in a while now so so I need to boost my ego so but bumper is great that you put this together this is fantastic and this organization the future of Freedom Foundation and great organizations you're supported and you should because bumper it's really good the other thing is I had a little bit of question about him he has all these

fantastic speakers and intellectuals and then he went and invited a politician to Congress so I don't know about that but I want to tell you though a bumper you did have a little competition for me to get here I had this other invitation it was really a tough choice there was there was a meeting held matter of fact in the area was over at Gentilly I don't know if you know what's going over her chin chin chilly but you know I was I was tempted to do that but then again I got to thinking it would be much better to be among friends and feel safe and secure because at other plays I might not have felt so safe but no it is it is great to be here and of course the title of my talk is you know defending and support the Constitution of the United States against all enemies foreign and domestic of course many people take that Oh sometimes I get a little bit confused on that because when I went to Washington I

[00:04:02 \(https://www.youtube.com/watch?v=pKjT9JizVgM&t=242s\)](https://www.youtube.com/watch?v=pKjT9JizVgM&t=242s)

that because when I went to Washington I thought I had a pretty good understanding about the Constitution but then you know we would go back and forth it turned out that my understanding was completely wrong and they tried to convert me but I had a little trouble listening to their arguments they told me something about the Constitution should be more flexible and it should be a living document it shouldn't be overly rigid and that's how you get into trouble so I I sort of struggled with that tremendously and then I got to thinking you know one compliment that I get that I don't mind getting this because I think sometimes it's the compliments are embellished a little bit more than it need to be but the one is that how did you go there how did you put up with that nonsense and and not have to join the gang because I was there for close to 24 years and of course the one thing was is my goals were different I didn't my goal wasn't to be the chairman of the committee because to do that you know you have to sell your soul you have to raise money a few minor little things like like that so it in my case I I do believe that when people say about me not joining the gang is true matter of fact the longer I was there the more I became very skeptical of government per se and I became more rigidly determined that the problems not with the people as much as it is with the government and the government is just way too big too intrusive and you have all this nonsense going on and that is the reason I believe that it's important that we stick to our principles and not say well a little bit of government here a little bit of the government there so for that reason I left Congress much more adamant being opposed to big government than the motivation I had to go to Congress but you know I think the the whole issue we talk about all that's going on today and

[00:06:02 \(https://www.youtube.com/watch?v=pKjT9JizVgM&t=362s\)](https://www.youtube.com/watch?v=pKjT9JizVgM&t=362s)

talk about all that's going on today and in foreign policy and the bickering that goes on there's a lot of that but the bickering that we hear from my viewpoint has nothing to do with the important issue and that has to do with philosophy I don't believe there's you know two parties I believe there's only one party there and I think bipartisanship is very bad I think coalition's are okay but bipartisan everything gets done by bar bipartisanship the two parties have to agree with everything has been done for the fifty years they agree on funding and not even examining these the security budgets in the CIA they don't it's always bipartisan going to war just let them go to war and we'll finance them so it's always a bipartisanship but those I frequently we get the criticism that I'm overly rigid and depends of what your rigid about depending on whether it's good or not but I remember one time there was a one of the members of Congress had well he was he was working to get a credentials that he was against corporate welfare so the export-import bank that appropriation was coming up so he wanted to cut at 5% which meant nothing and we had the vote and it didn't pass nobody would dare you know I cut the export-import bank so the next vote I had I wanted to abolish the export-import bank so I supported the other gentleman's read you know amendment to cut it a little bit but he wouldn't support months I went up to I say he look I thought you were against this time why why aren't you voting with this he says Ron your trouble is you always just go too far but I think this is one of the problems whether it's foreign policy or domestic policy if you concede the principle I think you can see 200 percent of it so if you say that we have to do such-and-such a type of welfare

[00:08:00 \(https://www.youtube.com/watch?v=pKjT9JizVgM&t=480s\)](https://www.youtube.com/watch?v=pKjT9JizVgM&t=480s)

to do such-and-such a type of welfare program or a little bit of war a little bit of intervention you can see this whole principle that we're supposed to do it so I do think although it's a goal that won't be easily achieved you take this principle and much has been said today about non-interventionism I love that term because non-interventionism tells you what Liberty is all about and it would work go a long way for foreign policies well that we we should be if we believe in the cause of Liberty we should be non-interventionist we should have a government that does not intervene in peaceful activity of all citizens just mine let us mine our own business and of course we should have a government and if you believe in markets you should have a non-interventionist government that doesn't try to regulate the economy and just think of the thousands and thousands of pages of regulations that go on so it's too much intervention and of course in foreign policy it's way overblown to wait way too much intervention but you know there was a time when it really bothered me when you started reading you know revisionist history because it challenged me quite frankly when I started reading a little bit about the lead-up to World War two and that there was supposedly knowledge possibly of what was going to happen at Pearl Harbor I just didn't want to believe that but my government and so it took a long time to sort of soften my stand on that but it the same way I was drafted in 1962 during the Cuban crisis which was discussed here today and then I was actually inducted in the service in the early 1961 I was I was a flight surgeon and and at the airport it in San Antonio the day before Kennedy was killed and I was in charge at charge of

[00:10:02 \(https://www.youtube.com/watch?v=pKjT9JizVgM&t=602s\)](https://www.youtube.com/watch?v=pKjT9JizVgM&t=602s)

killed and I was in charge at charge of the medical provision there but there was no way at that time when the assassination occurred that I would say you know the joke our government may well have been involved I wouldn't want to hear any part of that and of course you know things like you know you know the shooting up of the the Liberty is one thing and what about 9/11 Commission but I came I've come to a conclusion now to see if you you think is a pretty good assessment I think commissions are great have Commission study all this because when they're done they really help you out if you're looking for true look at what they've said and decided zactly the opposite is the truth conclusion we would have frequent briefings after 9/11 we had plenty there briefings all the time to tell us what's really going on I think I attended one and it was disgusting because I thought it was all just propaganda it was spinned it was trying to get you to endorse a policy so I had a general rule I just I just didn't go for two reason and you weren't going to hear the truth in the second reason is you could read it in the Washington Post the next day if you wanted it because they'll put the information out but no no the propaganda in Washington usually was just a distortion of what was going on especially in in in foreign art and in foreign policy but the whole idea of defending and supporting the Constitution pretty important we would we so how many people have said this oath you know in our government and yet there's a there's not a whole lot of support and defense of the Constitution I can simplify this because the oath that is taken says against all enemies foreign and domestic I've concluded that if you want to do

[00:12:00 \(https://www.youtube.com/watch?v=pKjT9JizVgM&t=720s\)](https://www.youtube.com/watch?v=pKjT9JizVgM&t=720s)

I've concluded that if you want to do that that you really only have about 50% of that responsibility because it's hard for me to figure out who is going to invade us and destroy our Constitution that all comes from internally and that's where the enemies are here they're destroying our constitute and just look at the loss of Liberty since 9/11 it's incessant and we do it to ourselves so that's up to me there are a lot of enemies that are internal and and that should be our job as much as anything but overall how do we how do we get to this point where we're so out of whack of what the intent was with our Constitution and I think one of the most important issues that deals with is an educational system I think if you look at the last 50 60 70 years matter of fact it even started under Eisenhower especially with the Department health education welfare and the Department of Education and now we have this totally bizarre evil monstrosity of cultural Mars and Marxism which is pushed by our universities I mean what kind of a university system that we have today where you can send a kid off gets a fancy degree and study something in social studies he ends up with the degree and \$70,000 worth of debt and he can't get a job and he's supposed to be educated it's a real mess and the longer the federal government especially has been involved the worse the educational system has become I

think it's an indoctrination system I think it starts in kindergarten and it's very simple and this is why I like these the simple answers to the problems there is no authority in the Constitution for the federal government to be involved in education and it should be taken out they will get rid of the Department of Education and maybe something much better could replace it because of the

[00:14:07 \(https://www.youtube.com/watch?v=pKjT9JizVgM&t=847s\)](https://www.youtube.com/watch?v=pKjT9JizVgM&t=847s)

better could replace it because of the system and what goes on this is a great influence you know the people I knew in Congress many all I considered very decent but very confused and they didn't understand economics you know at all and they reflect you know what they've been told and what they've been studied how many universities still today teach interventionist economics you know Keynesianism and whose most popular book and in all the universes Paul Samuelson you know it had nothing to do with sound money and free markets and this sort of thing so if and that's why the majority of people that come to Washington are going to do what they do and they and they feel good about it and once they accept this notion that there's something wrong with an overly rigid Constitution and they have this excuse that you should be ready to adapt the Constitution and then they get indoctrinated in are in our educational system then we end up with this mess that we have and yes the details are important and you know I spent a lot of time leading up to the Iraq war dealing with trying to point out all the reasons we should do it I think one time I had one talk I listed 34 reasons why we shouldn't do it and that's important to do that but overall it's really the principle of the thing should we be involved and the founders sort of gave us a hint stay out of entangling alliances we don't need this internationals we need more emphasis on personal liberty personal responsibility and not internationalism you know if education there was no prohibition about the states or local communities be involved with education I went through public school it was only the local community and then the

[00:16:00 \(https://www.youtube.com/watch?v=pKjT9JizVgM&t=960s\)](https://www.youtube.com/watch?v=pKjT9JizVgM&t=960s)

the local community and then the communities got bigger then the state took over and then it was the federal government took over and now it's the United Nations and everybody else that wants to get in on the act and and that that is what's wrong so I think that if you take that if you take a firm principle and say they shouldn't be involved then things would be much better now if you look at all our foreign policy you say well how do they how do they do this where they get all the money well they had to have a neat little system to finance this and welfare the welfare warfare state is very very real and its deadly and of course if you go back to a few years prior to World War one if you go back to 1913 they were already setting the stage they were setting the stage in one year they said that your income is not your income it all belongs to the government and will allow you to keep it if you do what we tell you and if you don't do what we tell you you will have to prove your you're going to be considered guilty until you prove yourself innocent so we started off small and we had the income tax and of course along with that then we had the viciousness of another instrument that I think that we should be and about and and that is another enemy of Liberty that is central banking you cannot solve these problems unless you deal with the monetary issue and the best way to deal with that is the same way you deal with the Department of Education you need to get rid of the Federal Reserve System and and of course and of course the yeah all the agencies and the Internal Revenue don't know the whole works we we just don't need that you know but the conditions that really excite people though will will be we

[00:18:01 \(https://www.youtube.com/watch?v=pKjT9JizVgM&t=1081s\)](https://www.youtube.com/watch?v=pKjT9JizVgM&t=1081s)

excite people though will will be we have to be a international leader we have to be the leader of the community we have to be a world leader Americans like it everybody likes it I like the idea I think we should be a world leader and but their idea the opposition their idea of a world leader as we own it that we have an empire and we support it and you do it with a gun I have another idea about a supporting world leadership is why couldn't we have a country based on personal liberty non intervention in our lives non-intervention economy non intervention other people's affairs have sound money in free markets and set a standard and be the real leader of the world not because we're telling them what to do but because maybe they would like

to emulate what we're doing because of our success that is my idea of being a world leader [Applause] the chances of that happening of course aren't all that good right now but you know like so many things there's a good a good part in a bad part to Indian and right now it's real easy to talk about all the bad things because this last hundred years has not been kind to Liberty and although there's great prosperity because if you unstuck you should feel real good but for some reason owning stocks right now from my viewpoint is superficial and it doesn't reveal what's really going on in this country and if you look and see what's happening in this country and who's doing it and who is the enemy you have some sorting out to do right now I am convinced at least half of our population you know are in trouble financially and even the economic statistics this week so you know we revealed this they have 95 million

[00:20:00 \(https://www.youtube.com/watch?v=pKjT9JizVgM&t=1200s\)](https://www.youtube.com/watch?v=pKjT9JizVgM&t=1200s)

revealed this they have 95 million people that are out of the workforce so what does that do they're out of the workforce so there are less people consider to be workers and an unemployment rates down to 4.3 so does that make everybody feel good well Wall Street feels good so it's it's gimmickry and of course when they ran into trouble and oay and o.9 what did they have they have a real financial crisis well let's go to the Congress and see what they can do because it's their responsibility well they you know they'd spend a billion here no truing here two trillion they're saying they're going to solve that problem but it was all fluff it it didn't do any good we know that that went debt actually doubled since that time we went from ten to twenty trillion dollars but while the Congress is tinkering around with a trillion dollars here and there the Fed is tinkering with 15 or 17 trillion dollars and passing it out to make the economy great you know we you know we there's a 500% increase in the balance sheet of the Federal Reserve and quite frankly it's not going to last and it will just distort things it will the enemy that if the philosophic enemies will have created this condition where there is a male distribution of wealth and so when the Liberals complain about that they're right that why is this this group over here more billionaires and ever before now we're going to have a trillionaire and yes 50 percent of the people really are under underemployed and it's a consequence though of the government it's a consequence of the Federal Reserve it's a constant of quints of what happens when you destroy a currency but right now we're able to do this you know through through the Federal Reserve System the people you know they accept this whole notion that it's all right to pretend that what you need is inflation

[00:22:01 \(https://www.youtube.com/watch?v=pKjT9JizVgM&t=1321s\)](https://www.youtube.com/watch?v=pKjT9JizVgM&t=1321s)

pretend that what you need is inflation money supply and money as wealth in that'll solve the problem which obviously isn't true the report this past week tells us a little bit about what's really going on New York City has tremendous number of people who are homeless it was the story yesterday was on that la la had a tremendous increase in people you know living on the street and they went and somebody did an interview and they talked to some of the people who were homeless and it wasn't like they weren't working some were working and trying to pay the bills and they were saying well my cost of living is too high and I and I can't do this and I can't afford the rent and because it's too high cost of living going up rents going up I work and it's not enough if what is our Federal Reserve say well we do have a problem here and we want to energize the economy and how we energize the economy is we need to take the price inflation rate up to 2% and we need more inflation and cause prices to go up and rising prices to them is a sign that there's prosperity it didn't help them Bob way and it didn't help businesses whele you know prices soar but they this is the ridiculousness of the system that we have but right now there's a bit of euphoria and people are feeling great and and we have been able to capture this by you know being in a position of printing and creating the reserve currency of the world and that of course really came out and some speakers alluded to the strength of United States after World War Two and it has been is very strong and very trusting we have the military we have the wealth and they trust us to a degree but less all the time and in but we've been able to do this

[00:24:00 \(https://www.youtube.com/watch?v=pKjT9JizVgM&t=1440s\)](https://www.youtube.com/watch?v=pKjT9JizVgM&t=1440s)

and in but we've been able to do this and deficits can be handled to the point but it's all an illusion and I think it all goes back to this idea that we as Americans should really question who the enemies are what are the odds right now of some country coming in here and invading and taking over maybe after the chaos who knows what's going to happen but even you know today we're in the Persian Gulf I guess you realized we were over there we have a few vessels over there and planes and bombs and drones and we have we're very much involved in making sure that nobody drags up a lot of scene and makes a new island in the South Sea South China Sea what would you know what would they what would we do what would the Texans do if they did that in the Gulf of Mexico what if they did in the Chesapeake Bay and nobody wants to rely on our in our country they generally don't want to look and put the same calculation on ourselves as on others in a to readily accept this idea that we are an exceptional nation and that we we have goodness to spread and all you have to do is look and where all that goodness is and ask whether or not the military-industrial complex is enjoying this goodness because they're part of they're part of the real problem and so this is a this is sort of you know inherent in the system and until we look at this in a from an intellectual viewpoint and decide you know what should our country be all about should we be defending and protecting Liberty or should be we pretend that we know how to run people's wine and so what are you going to do let the people died in the streets they won't have any medical scare and we know that's all a fraud more people are suffering from lack of medical care now since the government has been involved it's a disaster what's going what's happening and there's no way they can afford it once again how could we solve

[00:26:00 \(https://www.youtube.com/watch?v=pKjT9JizVgM&t=1560s\)](https://www.youtube.com/watch?v=pKjT9JizVgM&t=1560s)

afford it once again how could we solve that problem get the government out of believing and the American people believing that is the federal government's responsibility to distribute medical care they shouldn't be doing it they don't have a right to do it the one thing that has motivated many to support support our foreign policy is you know this whole idea that there's a danger of terrorism well there is there is a danger of terrorism but if you've seen the statistics comparatively speaking they're rather minor you know I think you have a hundred times greater chance again hit by lightning and by terrorists and if you looked at city crime and inner city crime and the results of the drug war how many people died and I think it's something like eighty eight in a day and yet you're talking a dozen or two or three from from terrorism but you got to build the fear the fear of an economic collapse and that's why the Fed has to do this and why Congress has to spend more money the same way on the militarism there they're dangerous they're coming they're going to get us and we have to go and stop them over there and you know the other biggest hoax on this foreign policy and this intrigue about defending the Constitution a lot of people you know how often you hear on TV now on why we have to be over there and why we had to go into Iraq the justification was to go into Iraq to defend our Constitution and defend our freedoms how ridiculous going to get you know did to go in you're defying the Constitution it was an undeclared war and we've made ourselves so much less free and people buy into this stuff but fortunately we still have vehicles we have the future of Freedom Foundation and the few others it's get this message out because it can be

[00:28:00 \(https://www.youtube.com/watch?v=pKjT9JizVgM&t=1680s\)](https://www.youtube.com/watch?v=pKjT9JizVgM&t=1680s)

get this message out because it can be changed and that's where I tend to be a lot more optimistic than you might believe because the the chances are going to be numerous it because one thing for certain is that the system that we have endless spending endless debt endless inflation of the money supply endless intervention it's going to end it's going to end and the big problem though that we have to face is how is it going to end is it you're going to be so chaotic that there be decades of real chaos where we can't survive and make it difficult or will it be an opportunity and I think it will be an opportunity because I think today we have more more groups giving out information like the future of Freedom Foundation and others and there's a lot of young people studying Austrian economics there's a lot of people who do care and understand what civil liberties is all about even though the campuses are a mess I still go to the campuses still can get some people out and there's a lot of people there that are on the wrong right track and the one thing that encourages me is I never look and say well I need to go out there one of my biggest rallies I had in presidential can't pay was it Berkeley believe her not I mean we it was huge but if I went there and thought

well I got to get 51% of the people Berkeley agreeing with this you know it would be just too devastating and but but there's always some there and in large numbers and they're enthusiastic and a young person if they get the right information they realize that they have a lot at stake and I I think it's a very encouraging on what's happening and that there's there's reason to believe that some some good can come of this I keep thinking of this in the big picture the big picture of movie is what's happened you know for literally hundreds if not thousands of years about

[00:30:01 \(https://www.youtube.com/watch?v=pKjT9JizVgM&t=1801s\)](https://www.youtube.com/watch?v=pKjT9JizVgM&t=1801s)

hundreds if not thousands of years about the human race developing not much really happen you know in the sense of technical developments up two by three years ago you think what was before that it was there was a lot of fancy things but really the fantastic technology and even today technology is improving the living condition and yet every time we improve the living condition it seems like we use the technology not only for some people's living condition and improving but it's also used to fight wars and kill people nor more efficiently drop bigger bombs and and you know get more involved but the the people who understand this realize that there could be a different way why is it that you know if we made this great change in the human race by technology it is and just in the last hundred years really there's been fantastic technological advances but what about what about the human race advancing otherwise why can't we advance on how we get along together you know that would be a real real real sure wouldn't it but you know I still come down on the side that I think most people are decent but not in Washington this wasn't as a different story because well anyway why they go there is it their story but but no I keep thinking my wife and I are raising kids we losing several states and five six different houses and we had a neighborhood I can't remember once where I worried about my neighbor my neighbors were always good neighbors sometimes we didn't talk much but we never had to worry about him and sometimes they would help help each other so I think people are I think there's more goodness in people than we give them credit for I think the problem is is that the people who like

[00:32:01 \(https://www.youtube.com/watch?v=pKjT9JizVgM&t=1921s\)](https://www.youtube.com/watch?v=pKjT9JizVgM&t=1921s)

is is that the people who like authoritarianism to tell people what to do they know it's illegal for an individual to go into your house and take what they want fortunately that moral standard still exists you can't personally take from people and hurt people it happens but basically most people recognize you can too but it's not illegal for the government to do it this is why it's so important if there are some good rules for us to have a good community in getting along with people we as a country and as a people what we have to do is hold the feed to the fire of government where those individuals that go to government are not allowed to use force or violence to try to have their way in any way whatsoever that I think would make a difference and there is only one rule you have to think about and it is not a complex rule I mean we have well what are what are the Keynesian interventionists and people who want to advantage these interventions for my boy you have to have a lot of rules you know and figure out what you do it on this hunting on this ham on this hand you do this write more regulations and on but there's only one rule that you need and that is the rule that we apply to ourselves we don't have a right to hurt people we don't have a right to steal from people and those are ancient traditions some thousands of years old plain is it we don't lie cheat steal or kill and yet we have governments involved probably in killing you know who knows what so we certainly have our government involved in killing you know with these undeclared illegal immoral wars you know like million Iraqis have died since we went in there to save that country it's it's just utterly tragic what what goes on so how do you how do

[00:34:00 \(https://www.youtube.com/watch?v=pKjT9JizVgM&t=2040s\)](https://www.youtube.com/watch?v=pKjT9JizVgM&t=2040s)

what what goes on so how do you how do you do that I think the founders try to solve that problem they tried to give us what they called a republic keep the cut to keep the government very small it advised us to stay out of entangling alliances allow a national defense but it didn't work so how do you how do you do it if it's natural for people who love authoritarianism to go where they can use their authoritarianism and it hasn't

work so what is the other option I think the other option is we need to change our idea of what the nature of government is and that is don't permit a government that can do these things and if we could just allow that to happen when it happens people do so much better you know it's not like they don't it's not like if tomorrow all government is wiped out in a minute with medical care believe me you know there would be some adjustments pretty fast fees would come down a whole lot let me tell ya and the insurance company wouldn't be breaking off the top and the drug companies wouldn't be abusing the system the management companies are involved all that expense that we've experienced for last not only on gamma care because the Republicans have introduced a lot of that to it's government intervention that caused all these prices to go up so if you eliminated all these middlemen believe me it would it would it would be so much better today even today under these conditions there are people who stake out totally private hospital and they just take cash and that's it they're out of the system and it actually worked so when you we have difficult situations like this and we're trying to find out who the real enemies are what we have to do is make sure there's always a loophole for everybody to opt out that was probably the most onerous thing about Obama care that you couldn't get out you had to be pushed into that thing but you ought to always be able to opt out the educational system in a way has an opt-out in it we can we can get out of it even though it's not universally

[00:36:02 \(https://www.youtube.com/watch?v=pKjT9JizVgM&t=2162s\)](https://www.youtube.com/watch?v=pKjT9JizVgM&t=2162s)

of it even though it's not universally available but they did try in the eighties to make sure that you couldn't homeschool your kids and there was a tack on home schooling in private school schooling and they want to regulate private school still but if you can get if you can get out of the system and if they eliminate any option to get out whether it's medical care or education that is very very bad and we worth at that point we're opting out is is more difficult so I think this is one thing that we could do but I believe that this is a non-viable system that we have and the enemies are more philosophic than they are just individuals who are Mis misled I think there's a philosophy behind it I think cultural Marxism is an accidental people who was mentally mislead they have goals because creole see chaos cultural chaos and for a strategy to destroy you know the culture that we have and sometimes we come up with these questions about how you protect civil liberties and pretty everybody's religious liberties and sexual liberties inside you know public institutions well the best way is get rid of the public institution and then and then if it's a private institution if it's a religious institution or a private institution you get to write your own rules oh well that introduces some some others other problems that means that you might have to make choices and who can come and who can go you know in freedom actually you are allowed to make your own choices and one other words they've destroyed is to be discriminatory we're all discriminatory everything we do you made a choice to come here I made a choice to stay away from Gentilly it's just that we always make these we always make these choices it's constant but they want to make you believe that you're not allowed to pick and choose we we do we pick our we pick our people who

[00:38:00 \(https://www.youtube.com/watch?v=pKjT9JizVgM&t=2280s\)](https://www.youtube.com/watch?v=pKjT9JizVgM&t=2280s)

we do we pick our we pick our people who come into our house we pick schools and all these things so it's constantly making choices but they don't want to somebody else is supposed to make them make those decisions for us and that that is what's so hard for people understand is in in civil liberties if people use their liberties to do things that we might not like how can we tolerate them because we don't agree with them on this if they do that one thing don't use force you know and we if we just sort of say you mind your own business do what you want call yourselves whatever you want but you cannot take your standards and push them and force them on somebody else Society would work but are the people who are in opposition to us they're not looking for peace and tranquility they're looking for chaos in right now they're they're on the verge of getting their chaos and in that but we have to look always look for you know a a solution and not tunity one other issue I want to touch on before I close and that is the the privacy issue you know because we do want to be safe and we do want to be secure and there's a room for a little bit of surveillance but it should be strict it should be strict and the founders thought about this this mass surveillance of all Americans this is atrocious but if you had had the whole system of having search warrants and all and there are so many solutions one of theirs one agency I don't know whether anybody here has ever been annoyed by TSA anybody in this

room been annoyed by TSA I'd like to get rid of the TSA and I voted against the TSA it should be private it should be the private people dealing with their customers and and that means there's technology now where they can scan people so so fast and that's one part of technology that wouldn't destroy productive jobs because the TSA agents would have to go get a

[00:40:01 \(https://www.youtube.com/watch?v=pKjT9JizVgM&t=2401s\)](https://www.youtube.com/watch?v=pKjT9JizVgM&t=2401s)

the TSA agents would have to go get a productive job and we would have better security than ever before so C but privacy is very very important that is a principle of Liberty but the solution is understanding where the importance of our life liberty and and our property and that is a natural right and it's come to us in a natural raise in a beneficial way and if we have enough people and believe it it doesn't need 51% it needs 10% at the most to change people's attitudes and that's why you're here in that in that's why you're part of that group and that's why you can have a lot of influence and that's why I'm optimistic I want to thank you very much today [Applause] [Music]
